

For Immediate Release

Press Release – October 27, 2005

Viloke and Neoxen Systems team up to bring integrated knowledge management solutions for global markets

Viloke, a leading Finnish vendor of virtual meeting and brainstorming solutions and Neoxen Systems have signed a partnership agreement to integrate their flagship product lines for the benefit of information workers working in virtual teams.

“Neoxen Systems and their Visual Modus product line bring immediate benefits both to us and to our customers. Their strong experience in international software business together with the flexible Enterprise Integration in their technology opens up completely new levels of efficiency for companies struggling to manage their information assets.” says Mika Kolbe, Chief Executive Officer at Viloke. “We are very excited about our joint initiatives to better serve our mutual customers.”

“We found the cAme solution as one of the most valuable collaboration and virtual work board platforms we have seen to date. It is a perfect fit for mobile organizations to manage the information flow efficiently,” says Esa Tervo, Chief Executive Officer at Neoxen Systems. “The key concepts in cAme well complement the core functionalities in our Visual Modus product line. We are happy to deepen our relationship with Viloke to ensure a successful path to better serve our customers worldwide.”

cAme is the environment and medium to facilitate team cooperation and collaboration regardless of time, place and device constraints. It is developed to meet the needs and demands of the contemporary fast-paced business environment allowing teams to collaborate and cooperate in an asynchronous virtual meeting environment. cAme is the work board of distributed processes - on the work board you see each process as an independent entity - a session. You may work on sessions any time you see fit, wherever you happen to be. For processing, you may use the most convenient device available at the moment: a personal computer, a

personal digital assistant (PDA), the browser of a smart phone, a WAP-enabled mobile phone or your normal email client.

Neoxen Visual Modus 2005 is a project documentation organizer and management application. It allows users to create role based views on information regardless of the origin and location of the data. For instance the documents, links, web pages and other pieces of information can actually reside in network directories, intranet and internet servers, and document and content management systems. Neoxen Visual Modus provides a single point of access to manage, restructure and share this vital information. As the first 32/64-bit solution it also allows users to reformat and mass-modify Microsoft Office documents of any type for consistent archiving or for reuse in new projects.

Viloke Oy (Inc.) designs, develops and markets collaboration software, which eases teamwork over information networks. The software allows businesses to take full advantage of distributed organizations, enabling them to maximize the utilization of their tacit knowledge capital.

The mission of the company is to help organizations to make high quality decisions by using information networks and modern information technology solutions.

Neoxen Systems is an international software company specialized in Process Management and Improvement, and Information Management solutions for global markets.

With our Neoxen technology and product family we help our customers to succeed by reducing their time-to-market efforts, increasing their customer satisfaction, improving quality and increasing their organizational performance.
