For Immediate Release

Press Release — 9th of November, 2007 - Turku, Finland

Neoxen® QX Framework Multi-platform Edition

Neoxen Systems has today announced OEM Partner Availability of Release 9.0.0 of the award-winning 32/64-bit Foundation Platform designed for distributed business and communications solutions.

Neoxen QX Framework is the core of Neoxen QX technology and the foundation of all the Neoxen products. It is a powerful development kit for multi-platform system software and distributed multi-tier business and communications applications for Microsoft Windows and Linux/Unix operating systems. It scales from small hand-held devices to clustered Windows/Linux/Unix server environments.

"Release 9 is a remarkable upgrade with extensive set of additions and fixes, and it is fully backwards compatible. New features include extended functionality for managing unstructured data, wider protocol support and enhanced server distribution concept", says Sari Peltonen, Chief Technology Officer at Neoxen Systems. "As usually, Neoxen QX Framework allows existing applications to run virtually unmodified and even to take advantage of the latest improvements in the framework."

Together with the included Visual Modus QX SDK it provides integration capabilities to any Information Management solutions supporting, ODMA, WebDav or any of the standard TCP protocols. Additionally it allows deep integration with Microsoft SharePoint 2007 and Bentley ProjectWise.

Neoxen QX Framework is fully internationalized and can be localized in any languages, including Chinese Simplified, Traditional Chinese, Japanese, Arabic and Hebrew.

Neoxen QX Framework is designed for project groups, systems integrators and independent software vendors for rapid system software development. Neoxen Professional Services uses it as a foundation technology in all the customer projects requiring a robust, high-performance platform.
