Press Release - 02/24/2004

Neoxen Systems released
Neoxen® QX Framework Release 5.0.0 for .NET

Neoxen Systems, an internationally operating technology and consulting company has today released Release 5.0.0 for their Neoxen® QX development platform targeted for distributed business application and systems integration solution vendors.

Neoxen® QX Framework is a powerful toolkit for rapid production of system software components and distributed multi-tier business applications for Microsoft® Windows® operating systems. It provides an internationalized small-footprint foundation, which drastically shortens design and implementation time and significantly reduces the overall project and development costs.

Neoxen® QX Framework is designed for project groups, systems integrators and independent software vendors for rapid system software development. Neoxen Professional Services uses it as a foundation technology in all the customer projects requiring a robust, high-performance platform.

"Release 5.0.0 is a remarkable upgrade with extensive set of additions and fixes and it is fully backwards compatible. New features include the Global Data Bank – an integrated SQL Engine – which brings the embedded data engine concepts into reality with this product release", says Esa Tervo, Chief Executive Officer at Neoxen Systems. "As usually, Neoxen® QX Framework allows existing applications to run virtually unmodified and even to take advantage of the latest improvements in the framework."

All the incremental updates and fixes since the previous version are packaged and certified into a unified release.

Neoxen® QX Framework Release 5.0.0 is available directly from the Neoxen Web Store.

For more information about availability, licensing, upgrade policy and other sales related matters, please contact sales@neoxen.com.
