For Immediate Release

Press Release – October 21, 2005

Neoxen Systems signs Visual Studio Industry Partner Agreement with Microsoft

Neoxen Systems and Microsoft Corporation signed a Visual Studio Industry Partner agreement for producing complementary Information Lifecycle Management solutions for Microsoft Visual Studio 2005 users.

"Microsoft Visual Studio Industry Partner Program provides excellent benefits for us. It brings us closer to our target audience worldwide and opens up new opportunities and joint initiatives together with Microsoft." says Esa Tervo, CEO at Neoxen Systems. "We have combined close to a decade of experience in enterprise content and document management systems with our latest inventions to produce Visual Modus 2005. With this agreement we are able to bring these innovations available globally."

As generally admitted, integration and adaptability to existing systems is a key issue in today's world. The Enterprise Integration Interface allows organizations to use Visual Modus 2005 in any document mass modification needs and use it seamlessly with their backbone systems. It integrates with the major document and content management systems, such as [Microsoft SharePoint Portal Server](), [Bentley ProjectWise]() and [EMC Documentum](). Embedded Scripting Engine gives an opportunity to extend and customize the Visual Modus 2005 functionality to perform any needed operations. Versatile document and information collections give logical views to the information depending on user roles, and make it easier to find the right knowledge whenever needed.

"The extensive improvements in Microsoft Visual Studio 2005 with the comprehensive set of Software Lifecycle Management tools provide practical advantages for our users developing high quality products." Esa Tervo continues. "Neoxen Visual Modus is developed from ground up in this new environment. Therefore we are able to bring our new generation

solutions for 64-bit desktops as well - and with localized versions to different segments of our customers."

Neoxen Visual Modus 2005 is designed to support Microsoft Visual Studio 2005 Team System, and Microsoft Solutions Framework. Furthermore, it is also compatible with, and perfectly supplements other major product development and software lifecycle management solutions from IBM / Rational, Borland, Telelogic, Softeam and Osellus.

The worldwide release of Neoxen Visual Modus 2005 will be in parallel with official release of Microsoft Visual Studio 2005 at 7th of November 2005.

Neoxen Systems is an international software company specialized in collaborative Process Management and Improvement, and Information Management solutions for global markets. We are working closely with the leading technology providers in order to produce value-adding 64-bit and 32-bit solutions for their existing and new customers.

We help our customers to succeed by reducing their time-to-market efforts, improving quality and increasing their organizational performance.
